Genetics is a branch of biology concerned with the study of genes, genetic variation, and heredity in organisms.. Gregor Mendel, a scientist and Augustinian friar, discovered genetics in the late 19th-century. Mendel studied "trait inheritance", patterns in the way traits are handed down from parents to offspring. He observed that organisms (pea plants) inherit traits by way of discrete "units" ... Molecular evolution is the process of change in the sequence composition of cellular molecules such as DNA, RNA, and proteins across generations. The field of molecular evolution uses principles of evolutionary biology and population genetics to explain patterns in these changes. Major topics in molecular evolution concern the rates and impacts of single nucleotide changes, neutral evolution ... Molecular Medicine 2019 Conference Information here : ME Conferences is pleased to announce the upcoming "4 th International Conference on Molecular Medicine and Diagnostics" during July 15-16, 2019 in Abu Dhabi, UAE.. Molecular Medicine 2019 focuses on sharing of scientific knowledge and experience in all areas applied to Molecular Medicine, Diagnostics and related scientific fields.
