

Download Velocity Ranges Industrial Ventilation A Manual Of Recommended Practice

I. Introduction A. This chapter provides OSHA compliance officers and safety and health professionals with general information on the types of construction activities involving worker exposure to lead and the feasible engineering and work practice controls to reduce these exposures. A shooting range, firing range or gun range is a specialized facility designed for firearms qualifications, training or practice. Some shooting ranges are operated by military or law enforcement agencies, though the majority of ranges are privately-owned and cater to recreational shooters. The CTC serves as a source of technical information for instruments and measurement technology. Much of the equipment and instrumentation discussed in this chapter is available from the CTC through the Agency Loan Equipment Program (ALEP), which may be found on the OSHA Intranet. Air Systems. There are many different types of air systems used to deliver the conditioned air to the areas or spaces requiring it. The single and dual duct systems are the two basic types of air duct systems that are used for distribution of conditioned air. The single duct system supplies air to each area at a constant temperature.
